

Vaccination management System

2nd semester E-project

We are deeply thankful to Sir Murtaza Ali for guiding us throughout this project. We also appreciate the collective effort of our team members who worked tirelessly to create the Vaccination Management System website.

Folders Structure >>

Folder Structure Overview >>

This folder structure is designed to organize and manage the files and directories for a web-based application. Below is a breakdown of each component:

1. **Root Folder:** This is the main directory that contains all the files and subfolders for the application.
2. **admin/:** This folder contains administrative-related files and panels.
 - a. **admin-dash/:** This subfolder likely contains files related to the admin dashboard, such as scripts, styles, or templates.
 - b. **hospital-panel/:** This subfolder may include files specific to managing hospital-related data or functionalities within the admin section.
3. **user-panel/:** This folder contains files related to the user interface or user-specific functionalities. It may include scripts, styles, or templates for user interactions.
4. **vms/:** This folder might be related to a "Visitor Management System" or another specific module within the application. It likely contains files for managing visitor data or related functionalities.
5. **fpdf.php:** This file is likely a library or script for generating PDF files. It may be used for creating reports, invoices, or other printable documents.

6. **logout.php**: This file handles the logout functionality for users, ensuring they can securely end their session.
7. **sql.txt**: This file may contain SQL queries, database schemas, or other database-related information. It could be used for setting up or managing the application's database.

Admin Files >>

1. **admin-dash**: The core folder for administrative operations.
2. **dashboard.php**: Main dashboard interface displaying key metrics and navigation.
3. **appointments...**: Manages appointment scheduling and tracking (e.g., patient visits).
4. **hospitals.php**: Controls hospital profiles, listings, or registration details.
5. **patients.php**: Handles patient records, including profiles and medical history.
6. **vaccines.php**: Manages vaccine inventory, distribution, or tracking.
7. **Vaccine Reque...**: Likely processes vaccine requests or allocation workflows.
8. **db_connection....**: Establishes database connectivity for backend operations.
9. **generate_pdf.p..**: **Creates PDF reports (e.g., patient summaries or vaccine logs).**
10. **download_rep...**: **Allows downloading reports in formats like PDF/CSV.**
11. **process_assign...**: **Scripts for assigning tasks/resources (e.g., staff to hospitals).**

12. **process_edit_h...:** Updates hospital details or modifies database entries.
13. **style.css:** Stylesheet for consistent UI design across admin pages.
14. **index.php:** Default entry point for the admin dashboard.
15. **Overall, Purpose:** Streamlines admin workflows—tracking data, generating reports, and managing healthcare operations efficiently.

Hospital Panel Files>>

1. **hospital-panel:** Core folder for hospital-specific management operations.
2. **index.php:** Default entry page for accessing hospital management tools and dashboards.
3. **beds.php:** Manages bed availability, admissions, and occupancy status in real-time.
4. **vaccine.php:** Tracks vaccine inventory, distribution schedules, and patient immunization records.
5. **profile.php:** Displays and edits hospital profile details (e.g., contact info, facilities).
6. **notification.php:** Handles alerts for urgent updates, appointments, or system notifications.
7. **script.js:** Adds interactivity to pages (e.g., form validation, dynamic content updates).
8. **style.css:** Defines styling rules for a consistent and user-friendly interface.

9. **p-img.jpg**: Placeholder image for hospital or department visuals in the UI.
10. **profile-img.jpeg**: Stores profile pictures of hospital staff or departments.
11. **Database Integration**: Files like index.php or beds.php likely connect to a backend database.
12. **UI/UX Focus**: Combines script.js and style.css for seamless navigation and responsiveness.
13. **Resource Management**: Centralizes bed, vaccine, and staff data for efficient coordination.
14. **Reporting**: Features like bed occupancy or vaccine usage reports may be generated here.

User- panel Files >>

1. **user-panel**: Main folder for user-facing interfaces and functionalities.
2. **index.php**: Default landing page for users, providing access to key features.
3. **contact.php**: Handles contact forms or displays contact information for support.
4. **schedule.php**: Manages appointment scheduling, bookings, or user calendars.
5. **services.php**: Lists available services, descriptions, or user-specific offerings.
6. **script.js**: Adds dynamic behavior (e.g., form validation, animations) to pages.
7. **web.css**: Central stylesheet defining the design and layout of user pages.
8. **logo.png**: Brand logo displayed on the user interface for recognition.
9. **vms-image.jpg**: Image related to a "Visitor Management System" or user guides.
10. **user.avif**: Possibly a custom user asset file (e.g., icons, templates).
11. **Navigation**: Pages like index.php and services.php ensure intuitive navigation.
12. **UI Consistency**: web.css and logo.png maintain branding and visual harmony.
13. **Functionality**: Combines scheduling (schedule.php) and support (contact.php) tools.
14. **Interactivity**: script.js enhances user experience with responsive elements.

LOGIN FORMS >>

1. **vms**: Main folder for managing visitor-related operations and authentication.
2. **style/**: Subfolder containing CSS files to style web pages (e.g., login, registration).
3. **login.php**: Handles user login functionality and authentication processes.
4. **register.php**: Manages visitor or staff registration forms and data submission.
5. **forgot-pass.php**: Allows users to reset passwords via email or security questions.
6. **fpdf.php**: Library for generating PDF files (e.g., visitor passes or logs).

Admin Panel UI>>

Admin Panel Dashboard Overview

This dashboard centralizes healthcare management tasks with the following key metrics and modules:

1. **Taskboard:** Quick-access modules for managing **Hospitals, Appointments, Patients, Vaccines, Vaccine Requests**, and **Certificates**.
2. **Total Hospitals:** Tracks **4 registered hospitals** with **15 beds** available, aiding resource allocation.
3. **Vaccine Requests:** Monitors **3 pending requests** across **5 registered users**, streamlining immunization workflows.
4. **Overview Metrics:** Displays trend data (16, 14, 12, 10, 8), likely representing monthly appointments, bed occupancy, or vaccine distribution.
5. **Purpose:** Provides real-time insights for efficient decision-making, resource tracking, and healthcare service coordination.

Code Admin Panel>>

```
<?php

Hospital Dashboard Overview

This dashboard streamlines hospital management with the following key features:

1. **Navigation Menu:** Access modules for **Dashboard**, **Vaccines**, **Beds**, **Notifications**, and **Profile**.
2. **Profile Section** (Dashboard > Profile):
 - a. **Name:** "City General Hospital" (hospital's official title).
 - b. **Email:** "contact@cityhospital.com" (primary contact for inquiries).
 - c. **Address:** Field to display or update the hospital's physical location (currently empty in the example).
3. **Vaccines:** Likely manages vaccine inventory, distribution, or patient immunization records.
4. **Beds:** Tracks bed availability, admissions, and occupancy status in real-time.
5. **Notifications:** Alerts for critical updates, appointments, or system messages.

Code Hospital Panel UI>>

```
<?php
session_start(); // Start the session

// Redirect to login if the user is not logged in or is not a hospital
if (!isset($_SESSION['user_id']) || $_SESSION['role'] !== 'hospital') {
    header("Location: login.php");
    exit();
}

$host = 'localhost';
$db = 'vms_db';

Hospital Dashboard Overview

This dashboard streamlines hospital management with the following key features:

1. **Navigation Menu:** Access modules for **Dashboard**, **Vaccines**, **Beds**, **Notifications**, and **Profile**.
2. **Profile Section** (Dashboard > Profile):
 - a. **Name:** "City General Hospital" (hospital's official title).
 - b. **Email:** "contact@cityhospital.com" (primary contact for inquiries).
 - c. **Address:** Field to display or update the hospital's physical location (currently empty in the example).
3. **Vaccines:** Likely manages vaccine inventory, distribution, or patient immunization records.
4. **Beds:** Tracks bed availability, admissions, and occupancy status in real-time.
5. **Notifications:** Alerts for critical updates, appointments, or system messages.

Purpose: Centralizes hospital operations, enabling staff to manage resources, track critical data, and maintain communication efficiently.
